Art Unit: 2834

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Eda (857).

Note Eda (fig. 6) where a quartz crystal piezoelectric element (#2) is directly bonded to a silicon substrate (#1) over a thru hole.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eda (857).

As noted above Eda (fig. 6) teaches the crystal unit structure. Eda does not explicitly mention all the specific crystal cuts claimed. However, selection from among known material has long been held to be within the skill expected of the routineer. The specific cuts of piezoelectric quartz are all well known per se (official notice taken). Thus to select from among these known cuts based on their known attributes would have been obvious to one of ordinary skill in the art.
